| Department  | Physics  |                               |
| Course  | MSc Physics  | Effective from the year: 2016 |
| Subject Code : 16 PPS 101<br>Title : Core I: Classical Dynamics | Semester: I  |                               |
| Hrs/Week:   | 5  | Credit: 4                     |
| Objectives  | <ul style="list-style-type: none"> <li>➤ To understand the Lagrangian and Hamiltonian formulations of Mechanics and to apply them to simple systems.</li> <li>➤ To learn how does the Canonical transformation lead to Hamilton Jacobi theory.</li> <li>➤ To understand the concepts of Rigid body dynamics, Small oscillations and Nonlinear dynamics.</li> </ul> |                               |

| Unit | Content   | Hrs |
|------|---|-----|
| I    | <p><b>LAGRANGIAN FORMALISM</b></p> <p>Constraints and Degrees of freedom - Generalized coordinates: Generalized Displacement, Velocity, Acceleration, Momentum, Force &amp; Potential - Variational techniques and Euler's Lagrange differential equation - Hamilton's Variational principle - Lagrange's equation of motion from Hamilton's principle - Deduction of Newton's second law of motion from Hamilton's principle - Applications of Lagrange's equation of motion: Linear harmonic oscillator - Simple pendulum - Isotropic oscillator - Particle moving under central force - Conservation theorems: Cyclic coordinates - Conservation of Linear momentum - Conservation of energy</p> | 13  |
| II   | <p><b>HAMILTONIAN FORMALISM</b></p> <p>Phase space - Hamiltonian - Hamilton's canonical equation of motion -Significance of H - Deduction of canonical equation from Variational principle -Applications of Hamilton's equation of motion: Simple pendulum - Particle in a central field of force - Hamiltonian of a Charged particle in an electromagnetic field - Principle of least action and proof - Canonical transformations - Generating function and different forms - Poisson brackets: Definition - Equation of motion in Poisson bracket form - Angular momentum and Poisson bracket relations</p>  | 13  |
| III  | <p><b>HAMILTON JACOBI THEORY</b></p> <p>Hamilton Jacobi method: H J partial differential equation - Solution of H J equation - Discussion on Hamilton's principle function - Solution of harmonic oscillator problem by H J method - Particle falling freely - H J equation for Hamilton's characteristic function - Kepler's problem solution by H J method - Action and Angle variables - Solution of harmonic oscillator problem by action angle variable method</p>   | 13  |

|    |   |    |
|----|---|----|
| IV | <p><b>RIGID BODY DYNAMICS &amp; SMALL OSCILLATIONS</b><br/> Euler's theorem - Euler's angles - Rotational kinetic energy of a rigid body - Equations of motion for a rigid body - The motion of symmetric top under the action of gravity - Types of equilibria : Stable &amp; Unstable equilibrium - Formulation of the problem : Lagrange's equations for small oscillations - Properties of <math>T, V</math> and <math>\omega</math> - Normal coordinates &amp; normal frequencies of vibration - Systems with few degrees of freedom : Free vibrations of linear triatomic molecule</p>                                | 13 |
| V  | <p><b>NONLINEAR DYNAMICS</b><br/> Dynamical systems: Linear &amp; Nonlinear forces - Mathematical Implications of nonlinearity: Linear &amp; Nonlinear systems, Linear superposition principle - Working definition of nonlinearity - Effects of Nonlinearity - Linear Oscillators: Linear Oscillators and Predictability: Free Oscillations, Damped Oscillations, Damped &amp; Forced Oscillations – Nonlinear Oscillators : Damped and Driven nonlinear oscillators : Free Oscillations, Damped Oscillations, Primary Resonance &amp; Jump Phenomenon, Secondary Resonances - Nonlinear Oscillations and Bifurcations</p> | 13 |

| Unit | Content   | Hrs |
|------|---|-----|
| I    | <b>ELECTROSTATICS AND MAGNETOSTATICS</b><br>Concept of charge - Coulomb's law - Gauss law - Multipole expansion of charge distribution - Dielectric and its polarization - Electric displacement D - Polarization of non-polar molecules - Lorentz equation for molecular field - | 13  |

|     |  |    |
|-----|--|----|
|     | Claussius Mossotti relation - Polarisation of polar molecules- Langevin equation-Debye relation and molecular structure - Current density - Ampere's law of force - Biot Savart law - Ampere's circuital law - Magnetic scalar and vector potential - Application to magnetic dipole   |    |
| II  | <b>FIELD EQUATION AND CONSERVATION LAWS</b><br>Equation of continuity - Displacement current $\mathbf{D}$ - Maxwell's equations - Energy in electromagnetic field - Poynting vector - Momentum in electromagnetic fields - Electromagnetic potential $\mathbf{A}$ and $\phi$ - Maxwell's equations in terms of electromagnetic potential - Concept of Gauge - Lorentz Gauge - Coulomb Gauge - Retarded potential - Lienard Wiechart potentials                       | 13 |
| III | <b>PROPAGATION AND INTERACTION OF PLANE ELECTROMAGNETIC WAVES</b><br>EM waves in free space - Propagation of E.M waves in Isotropic dielectrics - Anisotropic dielectrics in conducting media and in ionized media - Boundary conditions - Reflection and Refraction of EM waves - Fresnel's formula - Brewster's law and polarization of E.M.W - Total internal reflection - Reflection from a metallic surface - Propagation of EM waves between conducting planes | 13 |

(CONTD.....2)

( 2 ) ( 16 PPS 206 )

|    |   |    |
|----|---|----|
| IV | <b>RELATIVISTIC ELECTRODYNAMICS</b><br>Four vectors and tensors - Transformation equations for $\rho$ and $\mathbf{J}$ - Transformation equation for $\mathbf{A}$ and $\phi$ - Electromagnetic field tensor - Transformation equation for $\mathbf{E}$ and $\mathbf{B}$ - Covariance of Maxwell's equations : Four vector form & four tensor form - Covariance and transformation law of Lorentz force  | 13 |
| V  | <b>FUNDAMENTALS OF PLASMA</b><br>Occurrence of Plasma in nature - Definition of Plasma - Concept of Temperature - Debye shielding - Plasma parameter - Criteria for Plasma - Relation of Plasma physics to ordinary EM waves - Plasma Oscillations - Fluid equation of motion - Convective derivative - The stress tensor - Collisions - Equation of continuity - Equation of state - Complete set of fluid equations - Fluid drifts perpendicular to $\mathbf{B}$ - Fluid drifts parallel to $\mathbf{B}$ - Plasma approximation - Applications of Plasma Physics(Simple ideas). | 13 |

| Title          | : Core VII: Electronic Communications  |                               |
| Hrs/Week:      | 5  | Credit: 4                     |
| Objectives     | <ul style="list-style-type: none"> <li>➤ To understand the various modulation techniques.</li> <li>➤ To understand the generation of microwaves.</li> <li>➤ To understand the basics of satellite communication.</li> <li>➤ To understand RADAR communication systems.</li> <li>➤ To understand the building blocks of internet and e - mail communication systems.</li> </ul> |                               |

| Unit | Content   | Hrs |
|------|---|-----|
| I    | <b>ANALOG COMMUNICATION</b><br>Power and energy in a signal-model of communication system-modulation and frequency translation - Amplitude Modulation: DSB-SC, SSB, VSB and conventional AM - Superhetrodyne AM receiver - Frequency Modulation: Modulation index, spectrum and bandwidth, direct generation and demodulation, superhetrodyne FM receiver - Noise: noise power spectral density, white, thermal and shot noise, equivalent noise temperature - Signal to noise ratio and noise figure | 13  |
| II   | <b>PULSE MODULATION AND DIGITAL COMMUNICATION</b><br>Pulse Modulation: Sampling theorem, informal justification, pulse amplitude modulation, time division multiplexing and pulse time modulation - Pulse code Modulation: Quantization Error, bandwidth, companding and delta modulation - Data Transmission: Base band and radio frequency transmission, FSK  | 13  |

|     |   |    |
|-----|---|----|
|     | and PSK - Information Theory: Rate and measurement, channel capacity, Noisy and noiseless channel - Shannon's theorem   |    |
| III | <b>MICROWAVE SYSTEMS</b><br>Microwaves - Multicavity klystron - Reflex klystron - Magnetron - Travelling wave tube<br><b>SATELLITE SYSTEMS</b><br>Kepler's law - Orbits - Geostationary orbits - Power systems - Altitude control- Satellite station keeping - Antenna look angles - Limits of visibility- Frequency plans and polarization - Transponder | 13 |

|    |   |    |
|----|---|----|
| IV | <b>RADAR SYSTEMS</b><br>Fundamentals - Radar performance factors - Pulsed radar systems - Antennas and Scanning - Display methods - Search radar systems and tracking radar systems - Moving target indication - Radar beacons - CW Doppler radar - Frequency modulated CW radar - Phased array radars - Planar array radars  | 13 |
| V  | <b>INTERNET SYSTEMS (ELEMENTARY IDEAS ONLY)</b><br>The wired world of the Internet - Information through the Internet -Linking net works to the Internet - TCP/IP - Internet addresses and domains - Anatomy of web connection - Internet file types – DNS - Routers - Client/Server Architecture - Connectivity between Computer and Internet - ISDN<br><b>E-MAIL SYSTEMS (ELEMENTARY IDEAS ONLY)</b><br>Anatomy of mail message - E mail through Internet - E mail software and E-mail between networks | 13 |
